

Santiago Moreno Díaz

Senior Technical Artist at Digital Sun Games, where I've worked on *Moonlighter*, *Moonlighter 2* and *Cataclismo*. Before that I did engine work for *Fable* at d3t (Keywords Studios). I like technical work with room for creativity: graphics, tools, animation and optimization. Lately I've been working with AI coding agents like Claude Code and Codex, and teaching artists to use them in Unreal (through MCP) and Unity (through the CLI).

EXPERIENCE

2021 — Present

Senior Technical Artist · Digital Sun Games

Valencia, Spain

- *Moonlighter 2: The Endless Vault* (Unity, PC & consoles), from pre-production to release: shaders and shading, procedural content generation, optimization and porting, bridging art and code.
- Unannounced Unreal Engine projects: C++, Niagara, PCG, materials and tools.
- Optimization and profiling support on *Cataclismo*.

2020 — 2021

Programmer · Digital Sun Games

Valencia, Spain

- *Moonlighter* Mobile (Unity, iOS & Android): bringing the action RPG and shopkeeping game to phones.

Jul 2019 — Mar 2020

Junior Core Tech Programmer · d3t (Keywords Studios)

Runcorn, UK

- Engine work for the new *Fable*, alongside Playground Games. I added engine features and improved tools so artists could create assets faster.

2019

Junior Programmer · Bulkhead

Creators of Battalion 1944, The Turing Test and Wardogs

- Animation integration in Unreal Engine 4 and IK solvers for an upcoming title.

EDUCATION

2018 — 2019

BSc (Hons) Computer Science for Games: First Class

Sheffield Hallam University

2015 — 2018

BTEC HND Computing & Systems Development: Distinction

ESAT, Valencia

TOOLBOX

Languages

C#, C++, C, GLSL / HLSL

Engines

Unity, Unreal Engine, custom engines

DCC tools

Blender add-ons, Python, artist pipelines

Tools

Visual Studio / Rider, Git, Perforce, Plastic SCM, RenderDoc, PIX, Claude Code, Codex
